# R&S®UDS DIGITAL MULTIMETERS

Built for accuracy, designed for ease

Data Sheet Version 01.00

ROHDE&SCHWARZ

Make ideas real

## MEASUREMENT CAPABILITIES LIKE NEVER BEFORE

The R&S®UDS family of compact digital multimeters is engineered for both general-purpose and production line environments. Renowned for their versatility and precision, the multimeters can simultaneously display three measurement functions, streamlining test workflows. Beyond the standard 12 measurement functions, the multimeters offer built-in statistical and mathematical functions and an intuitive user interface for smooth and efficient testing.

Accuracy, speed and usability are vital to digital multimeters. The instruments are indispensable in circuit troubleshooting, component testing and system validation. The R&S°UDS family of digital multimeters are a powerful solution and include 5½ and 6½ digit multimeters, tailored for both laboratory and production testing. The large screen can display three values at the same time and be easily viewed from a distance.

Both models come fully equipped with essential measurement capabilities for all testing environments. Users can effortlessly navigate through DCV, DCI, ACV, ACI, frequency, resistance, temperature, capacitance, diode and continuity testing functions. Front panel sense sockets support four-wire measurements that require low/high connections. The basic functions are complemented by statistical measurement capabilities and limit testing features. Users can configure statistical parameters and set measurement limits. Display colors change to indicate limit violations: red for out-of-limit values and green for within-limit ones. An optional error tone can be toggled with the beeper soft menu key.

Auto-ranging eliminates the need for manual adjustments while improving efficiency and reducing tact times. Instrument settings can be conveniently stored and retrieved with the save and recall function.

The R&S $^{\circ}$ UDS600 digital multimeter has exceptional DC accuracy with 0.0075% precision. Such high levels of accuracy and 6½ digit resolution mean that even the most minute variations can be precisely captured.

All instruments in the R&S°UDS family can be remotely controlled via Ethernet or USB. A virtual COM port and the USB test and measurement class (TMC) are supported. Remote control commands comply with SCPI standards and cost-free driver packages for LabVIEW, LabWindows/CVI and IVI.net are available. The packages enable seamless integration of R&S°UDS instruments into existing systems. The R&S°UDS500-G and R&S°UDS600-G models fit effortlessly into the R&S°HZC95 2 HU 19" rackmount kit, making them ideal for production environments.

#### **Kev facts**

- ► Measurement range: DC to 100 kHz
- ▶ Digit resolution: up to 6½ digits
- ► Basic DC accuracy: 0.0075%
- ► Up to 200 readings/s
- ► Measurement functions: basic, mathematical
- Resolution: 100 nV, 10 nA, 0.1 mΩ, 0.1 pF, 1 Hz, 0.1 °C

### **BENEFITS**

#### **FOUR MODEL SERIES**

- ► R&S®UDS500: 5½ digital multimeter
- ► R&S®UDS500-G: 5½ digital multimeter with GPIB interface
- ► R&S®UDS600: 6½ digital multimeter
- ► R&S®UDS600-G: 6½ digital multimeter with GPIB interface

#### **MEASUREMENT ACCURACY**

- ▶ Up to 2000000 counts
- ► Basic DC accuracy: 0.0075 %
- ➤ Signal acquisition from DC to 100 kHz, with up to 200 measurements/s
- Resolution: 100 nV, 10 nA, 0.1 mΩ, 0.1 pF, 1 Hz, 0.1 °C

#### **MEASUREMENT VERSATILITY**

- ➤ Simultaneous display of three measurements, e.g. DC, AC and statistics
- ► Up to 12 measurement functions: DCV, DCI, true RMS, ACV and ACI, frequency, two-wire and four-wire resistance, capacitance, continuity test, diode test, temperature, power
- ➤ Versatile mathematic functions: limit testing, min./max., average, offset, DC power, dB, dBm
- ► Brilliant QVGA color display for excellent readability
- ► Limit testing directly on the display for easy minimum/maximum analysis
- ► Long-term data logging in CSV format via USB flash drive

#### REMOTE CONTROL

- ► USB port (virtual COM port, USBTMC)
- ► Ethernet interface (LAN) with integrated web server
- ▶ Remote control via SCPI based commands
- Driver packages for LabVIEW, LabWindows/CVI, IVI.net
- ► R&S®UDSx-G models: also IEEE-488 (GPIB) interface
- ► Code compatible with R&S®HMC8012

#### **INCLUDED ACCESSORIES**

- 1-m silicon test leads with safety connector and test probe
- ► Set of power cables
- ► Quick start guide

### VERSATILE FUNCTIONS

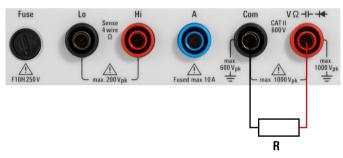

#### Manual and auto ranging

The range up or range down soft menu keys can adjust the measuring range. Range down switches to the next lower range, while range up switches to the next higher range. When auto range is deactivated, manual adjustments are necessary. When auto range is activated, the device automatically selects the optimal measurement range. If the measured value exceeds the selected range in manual mode, an "over range" message will appear.

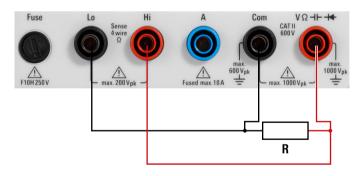

#### Two- and four-wire measurements

The R&S°UDS digital multimeters support both two-wire and four-wire measurements. They feature four front panel sockets: Com, V, Lo and Hi. For two-wire measurements, only the Com and V sockets are required. Four-wire measurements also require Lo and Hi sockets (Sense).

#### Two-wire measurements

#### Four-wire measurements

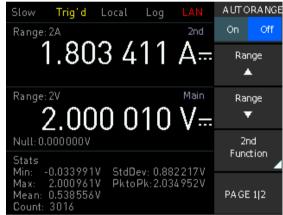

#### Multiple value function

Depending on the selected measurement function, users can display multiple measured values. The primary measurement value is main. A secondary measurement value can be activated or deactivated with the soft menu key. When activated, the secondary measurement value is displayed above the primary measurement value. If none is selected, the secondary value is deactivated. When clipping occures in one of the functions, values for both functions are invalid. <sup>1)</sup>

#### **Built-in statistics**

In addition to the basic functions, R&S°UDS multimeters offer mathematical functions. The integrated statistics in the R&S°UDS show min./max., mean, standard deviation, peak-to-peak and count. These can be activated with the stats soft menu. Statistical values can be toggled on/off with the stats soft menu button. The statistical functions are displayed below the primary measurement value.

Recommended range selection for ACV/DCV dual function use: range AC < range DC.</p>

#### **Limit testing**

The limit testing feature on the color display is ideal for conducting minimum and maximum analysis. The R&S®UDS digital multimeters have programmable test functions, including max./min. limits on/off. The display color changes to indicate limit violations: red for out-of-limit values and green for within-limit values. An error tone can be toggled on/off with the beeper soft menu key and sounds when limits are violated.

#### Save and recall functions

The save and recall functions make it easy store and retrieve frequently used settings. Instrument settings can be freely stored and accessed via the save/recall button. To save current settings, select the save submenu, choose the storage space and name the file. The settings can be reloaded later with the recall submenu.

#### **Data logging**

The R&S°UDS digital multimeters have a data logging function that records all measured values. The data can be saved on an external USB flash drive or transferred to an external PC with a USB or LAN connection. The data rate of up to 10 sample/s means the measured values are available every 100 ms.

#### Rear view of the R&S®UDS without GPIB

Rear view of the R&S®UDS with GPIB

### **IDEAL FOR LABS AND TEST SYSTEMS**

#### Tailored for labs and production test systems

R&S®UDS digital multimeters were developed for challenging applications. The multimeters are used in R&D labs and integrated into production test systems.

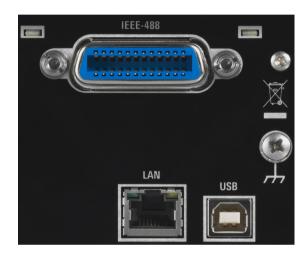

The instruments can be installed on 19" racks with the R&S°HZC95 rack adapter. The compact design lets two instruments be installed next to each other.

#### **Full remote capabilities**

All R&S°UDS instruments can be remotely controlled for use in test systems. Standard commands for programmable instruments (SCPI) are used. The following interfaces are available:

- ▶ USB and LAN (Ethernet) interfaces as standard
- ► IEEE-488 (GPIB) interface: R&S®UDS500-G and R&S®UDS600-G models with additionally IEEE-488 (GPIB) interface

Note: This interface cannot be retrofitted to the standard models.

#### Modern architecture: small, compact and quiet

Benches or racks are always crowded. R&S°UDS measuring instruments take up very little space regardless of their digital resolution. The temperature-controlled fan helps keep the workplace quiet.

### **SPECIFICATIONS**

#### **Definitions**

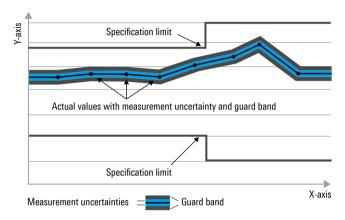

#### General

Product data applies under the following conditions:

- ▶ Three hours of storage at ambient temperature followed by 30 minutes of warm-up operation
- ▶ Specified environmental conditions
- ▶ Recommended calibration interval
- ▶ All internal automatic adjustments performed, if applicable

#### Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as <,  $\le$ , >,  $\ge$ ,  $\pm$  or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

#### Non-traceable specifications with limits (n. trc.)

Represent product performance that is specified and tested as described under "Specifications with limits" above. However, product performance in this case cannot be warranted due to the lack of measuring equipment traceable to national metrology standards. In this case, measurements are referenced to standards used in the Rohde & Schwarz laboratories.

#### **Specifications without limits**

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value, e.g. dimensions or resolution of a setting parameter. Compliance is ensured by design.

#### Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

#### Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter, e.g. nominal impedance. In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

#### Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

#### Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are designated with the format "parameter: value".

Non-traceable specifications with limits, typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bit per second (Gbps), million bit per second (Mbps), thousand bit per second (kpps), million symbols per second (Msps) or thousand symbols per second (kpps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Msps, kpps, ksps and Msample/s are not SI units.

Basic specifications		
	R&S®UDS500	R&S®UDS600
Number of digits	5½	61/2
Measurement functions		resistance (two-wire and four-wire), capacitance, test, temperature, power
Mathematical functions	limit testing, minimum, maximum, average	, offset, DC power, calculation of dB and dBm
Maximum reading rate	200 re	adings/s
DC basic accuracy	0.015% of reading	0.0075% of reading

	overload protection	1000 V in all ranges
AC voltage	measuring method	AC coupled true RMS measurement
	input resistance	1 M $\Omega$ parallel < 100 pF (on all ranges)
	crest factor	max. 10 (0.5% additional measurement uncertainty)
	CMRR	$>60$ dB, 1 $k\Omega$ in the Lo line and frequency $<60~\text{Hz}$
	overload protection	750 V (RMS) (in all ranges)
DC current/AC current	shunt resistor	11.01 $\Omega$ at 20 mA
		1.01 $\Omega$ at 200 mA 10 m $\Omega$ at 2 A, 10 A
	overload protection	fuse 10 A, F characteristic, on the front panel
		fuse 10 A, T characteristic, inside the device
Resistance	measuring method	two-wire and four-wire
	overload protection	1000 V for all ranges
Continuity test	measuring method	1 mA constant current
	threshold value	adjustable in 1 Ω steps
	response rate	200 measurements/s
	overload protection	1000 V
Diode test	measuring method	1 mA constant current
	threshold value	adjustable in 10 mV steps
	response rate	10 measurements/s
	overload protection	1000 V
Temperature	measuring method	resistance measurement with platinum sensor
	sensor types	PT100, PT500, PT1000
	connection	two-wire and four-wire
	overload protection	1000 V
Math functions	statistics	min./max./average/standard deviation
	relative measurement	Null key, offset via keyboard
	logarithmic function	dB: reference level via keyboard or Null key dBm: reference impedance 50/75/600 $\Omega$ or freely
		selectable
D	maximum acquisition rate	
Data logging		10 sample/s
Data logging	maximum logging time	unlimited
Data logging	memory depth internal	unlimited 512 kbyte
Data logging	memory depth internal memory depth external	unlimited 512 kbyte USB flash drive (max. 4 Gbyte)
Data logging	memory depth internal	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000
Data logging	memory depth internal memory depth external	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity
Data logging	memory depth internal memory depth external	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution)
	memory depth internal memory depth external number of measuring counts rate log	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s
	memory depth internal memory depth external number of measuring counts	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s internal: 250 s to 25 000 h
	memory depth internal memory depth external number of measuring counts  rate log  duration log	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s internal: 250 s to 25 000 h external: defined by USB flash drive capacity
Data logging (continued)	memory depth internal memory depth external number of measuring counts rate log	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s internal: 250 s to 25 000 h external: defined by USB flash drive capacity main, second, timestamp
Data logging  Data logging (continued)  Interfaces	memory depth internal memory depth external number of measuring counts  rate log  duration log	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s internal: 250 s to 25 000 h external: defined by USB flash drive capacity main, second, timestamp USB 2.0 (TMC and CDC/VCP)
Data logging (continued)	memory depth internal memory depth external number of measuring counts  rate log  duration log	unlimited 512 kbyte USB flash drive (max. 4 Gbyte) internal: 50 000 external: defined by USB flash drive capacity minimum: 5 ms (typ.) (in line with measuring function and resolution) maximum: 3600 s internal: 250 s to 25 000 h external: defined by USB flash drive capacity main, second, timestamp

Additional specifications		
	R&S®UDS500	R&S®UDS600
Remote control		
Command processing time		≤ 30 ms (nom.)
Protection functions		
Type of protection functions	autor	natic shutdown if the internal shunt is overloaded
Fuse		internal 20 A fuse
Resolution		
Voltage	1 μV	0.1 μV
Current	0.1 μΑ	0.01 μΑ
Resistance	1 m $\Omega$	0.1 mΩ
Capacitance	1 pF	0.1 pF
Temperature	0.1°C	0.1°C
Limit testing		PASS/FAIL indication with color coding
Display		3.5"/QVGA (color)
Display resolution	5½ digits, 10 updates/s	6½ digits, 10 updates/s
Front panel connections		4 mm safety sockets
Rear panel connections		standard

Description	530H/250 V
Storage temperature range	530H/250 V
Humidity   noncondensing, 5 % to 80 %   Altitude   operating altitude, max. 2000 m and power rating   Mains nominal voltage   115 V/230 V (± 10%)	530H/250 V
Altitude operating altitude, max. 2000 m at Power rating  Mains nominal voltage	530H/250 V
Power rating	530H/250 V
Mains nominal voltage       115 V/230 V (± 10%)         Common mode voltage       ► CAT II: 300 V AC (RMS)         Nains frequency       ► T50 V AC (RMS)         Maximum power consumption       50 Hz to 60 Hz         Rated current       max. 0.5 A         Mains fuses       100 V to 115 V power source, F6         230 V power source, F400H/250         Product conformity         Electromagnetic compatibility       EU: in line with Directive 2014/30/EU       applied harmonized standards: ► EN55011 (Class A)         Korea       KC mark         Electrical safety       EU: in line with Low Voltage Directive 2014/35/EU       applied harmonized standard: EN61010-2         USA       UL 61010-1       EN61010-2         ROHS       EU: in line with EU Directive 2011/65/EU       applied harmonized standard: EN IEC 63000         Mechanical resistance         5 Hz to 55 Hz, 0.3 mm (peak-to-const.,
